

## Day 07 – April 24, 2025

### PlayWright –

- Started with creating a new playwright project using “npm init playwright@latest”
- Used “npx playwright test” to run the test
- Used “npx playwright show-report” to see the report in html format
- Used “npx playwright test --project chromium” to run the test in only chromium browser
- Used “npx playwright test -g "has title"” to run a particular test by its name
- Used “npx playwright test --last-failed” to run the last failed test
- Used “npx playwright test --project chromium --trace on” to keep track of the results

Then, we used “test.only()” to run only the desired test.

```
test.only('focus on this test case', async ({page}) => {  
    // code here  
})
```

Then, we used “test.skip()” to skip a particular test.

```
test.skip('skip this test case', async ({page}) => {  
    // code here  
})  
  
test('meow', async ({page, browserName}) => {  
    test.skip(browserName === 'chromium', 'still working on it')  
    // code here  
})
```

Practiced the same on different websites.
